DID YOU KNOW?

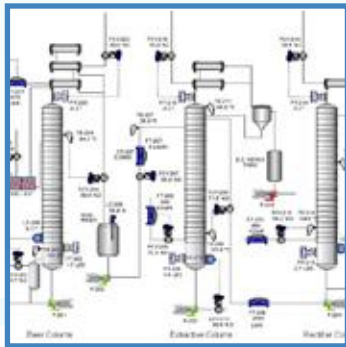

Cemcorp Ltd. has engineered and developed a windows based software allowing absolute control over systems previously handled by Programmable Logic Controllers (PLC's).

PCbrew® and PCflow® are applicable to any process control.

PCbrew® & PCflow® Systems

Want more control over your process? Do you desire consistent quality brewing and distilling? Is reliability and expandability important to you and your business? Searching for a system that allows for precise control and full integration? Looking for real results? We can help!

Why Choose PCbrew® & PCflow® Systems?

After having worked with reputable brewers like Amstel, John Labatt, Molson Breweries of Canada, and Stroh Brewery of Michigan we identified a need in the industry that was difficult to ignore. When we found no single solution addressed their need for increased control and automation over their processes, or at least did a great job of it, we aimed to do just that. We developed a solution to meet their needs and introduced PCbrew® and PCflow® to the marketplace. The key to successful brewing is CONTROL and PCbrew® is Cemcorp's fully integrated PC package gives you precisely just that.

Since launching our solution it's been implemented as far east as Taiwan at the Cheng Kung Brewery, and as far north as Anchorage, Alaska at Prince Brau Alaska Inc.

Take a look at our website for more information and view some projects we have done.

"Since 1997, we have made the right decision by hiring Cemcorp Ltd. We run our onsite microbrewery "Pints Brewery & Sports Bar" using Cemcorp's PCbrew® control system. It has saved us time and money plus has allowed us to further develop our award winning handcrafted beers."
