Process Automation

Want more control over your process? Do you desire a consistent and quality output? Is reliability and expandability important to you and your business? Should the system have full integration? Well, choosing the right system can be overwhelming. We can help!

Why Choose Cemcorp for your Process Automation?

After having worked with reputable companies like Amstel, John Labatt, Molson Breweries of Canada, J Wray and Nephew and Diageo Canada, we identified a need in the industry that was difficult to ignore. The need to have precise control over the process. No single solution addressed this, or at least did a great job of it, so we aimed to do just that. Our approach is to develop an automated process system that is tailor made. You are not limited or restricted to standardized solutions in the market. We know that the key to a successful process is CONTROL and Cemcorp's process automation approach provides you with complete control in order to optimize your output.

Since launching our solution it's been implemented as far east as Taiwan at the Cheng Kung Brewery, and as far north as Anchorage, Alaska at Prince Brau Alaska Inc.

Visit our website for more information or email us at cemcorp@cemcorp.com.

Since 1997, we have made the right decision by hiring Cemcorp Ltd. We run our onsite microbrewery "Pints Brewery & Sports Bar" using Cemcorp's process control system. It has saved us time and money plus has allowed us to further develop our award-winning handcrafted beers."

Cemcorp's Automation System Features & Benefits:

- Consistency and repeatability
- Easy set up, customized as needed
- Simple "point and click" screen commands
- Export of reports and spreadsheets
- Ability to remotely monitor the system
- Expandable and upgradeable
- Cost effective

Our Approach - What's Involved:

- Review the current process
- Prepare preliminary automation design
- Identify customization upgrades and add-ons
- Complete automation design including software programming
- Provide full system documentation, operator training, and on-going support

Getting Started As Easy As

1

START

Lean costs to get started and minimal effort required!

2

EXPAND

Is your process growing? No problem! Installing add-ons and making upgrades is easy.

3

AUTOMATE

If you want complete control over your process and ease of use, our Process Automation is the solution for you!
